

ENVIRONMENTAL POLICY

VTC TPE Group takes its responsibility for the environment seriously and is fully committed to delivering a record of responsible environmental performance across all its operations.

We operate to strict regulations, set by the national environment agencies of the countries in which we operate. We are committed to ensuring our facilities have as low an impact as possible on local people and the environment and we continue to work in partnership with community groups and other stakeholders to ensure that we are a responsible neighbour.

Purpose

Through our work in the field of thermoplastic elastomers (TPE) we will contribute to decreased environmental stress and work for an increased use of recycled products.

We will achieve this by:

- Highlighting the environmental advantages of TPEs in relation to other products.
- Contributing to lowest total cost and highest safety for people and the environment in our product development.
- Working with our suppliers, we will choose raw materials and additives with as low an impact on the environment as possible
- We will comply with all legal environmental requirements and regulations.
- We will choose production equipment, logistical and packaging solutions which have as low an impact on the environment and resources as possible.
